

Postify AI

We've built an AI-powered content creation platform designed to help individuals and businesses create and **publish** content faster and more efficiently. Whether you're Creating social media posts, blogs, YouTube scripts, programming tools, or working with other content templates and want to generate content with Autoposting directly , our platform makes the process 5× faster compared to doing it manually.

Core Features

Our platform is built on three key pillars:

1. **AI Content Generation**
Create high-quality content in seconds using advanced AI models. We use Google's Gemini model for writing and Stable Diffusion XL for generating stunning visuals—perfect for social media, blogs, marketing materials, and more.
2. **Content Autoposting**
Instantly publish AI-generated content to platforms like **Instagram** and **LinkedIn**(working on more other platform). No need to download, copy, or paste—just create and post directly from the app.
3. **Scheduled Autoposting**
Plan your content in advance and let the platform post it for you at the right time. It's perfect for staying consistent without constant manual effort.

Tech Stack

- **Next.js(Typescript)** - Framework
- **MongoDB** – Backend database
- **ShadCN** – UI components for a clean and responsive interface
- **Clerk** – User authentication and account management
- **Razorpay** – Integrated payment system for subscriptions
- **Gemini Model** – For AI text generation
- **Stable Diffusion XL** – For AI-based image generation
